PolarPan™ ROUND PLUMBING PANS

ROUND PAN INSTALLATION INSTRUCTIONS

Figure 1

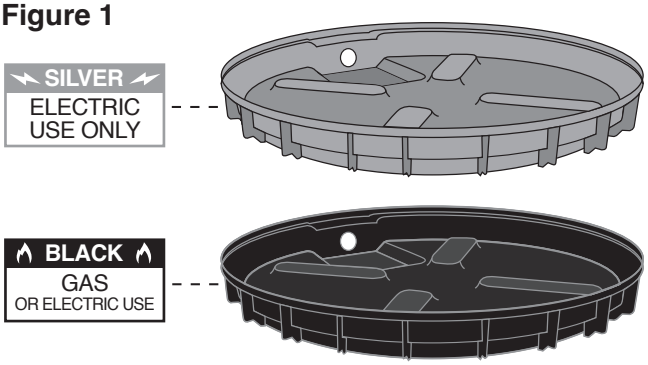

Figure 2

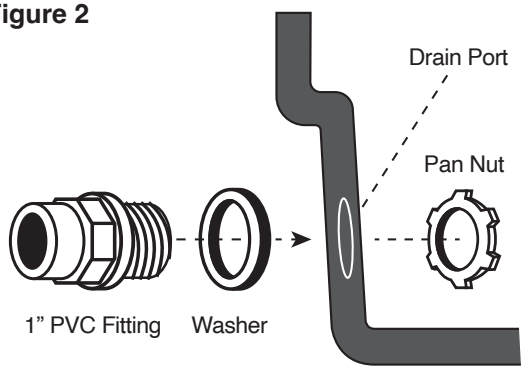

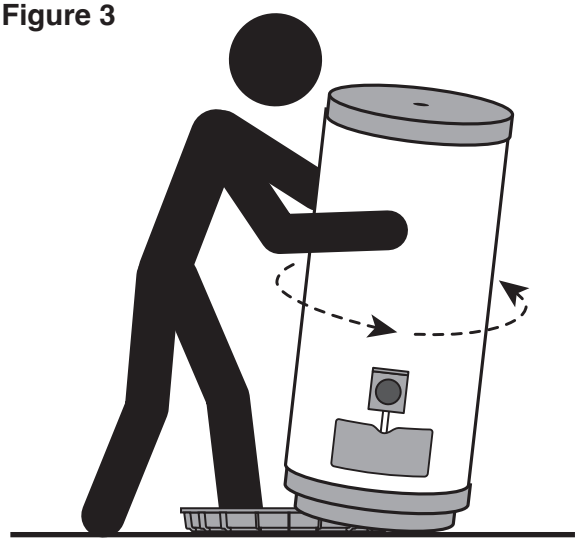

Figure 3

IMPORTANT:

SILVER PANS ARE FOR ELECTRIC USE ONLY
BLACK PANS MAY BE USED FOR GAS OR ELECTRIC

Parts & Hardware Included:

Each PolarPan comes with the following components pre-installed. **(Figure 2)**:

- (1) 1" PVC Drain Fitting
- (1) Rubber Washer
- (1) Pan Nut

Step 1 – Inspect Equipment

Before installing, inspect equipment for any signs of damage that may have occurred during shipping. If damaged, do not use equipment.

Step 2 – Retighten Pre-Installed Fitting

To save you time and work, PolarPans ship with fittings pre-installed. Fittings may loosen during shipping. Retighten fittings to make sure they are secured. Do not over-tighten.

Step 3 – Prepare Surface

Remove any debris from beneath the area where the pan will be installed. Set pan on a flat, level surface.

Step 4 – Roll Heater into Place

Place one foot inside of PolarPan to stabilize it. Rotate water heater to roll it over the rim into the pan. Place water heater in the center of the pan for maximum stability. Unlike metal or aluminum pans, PolarPans will not crease, dent or bend. **Figure 3**

Step 5 – Plumb Drain Pan

Plumb pan according to any applicable local codes. Install any desired leak detection in the pocket/recessed area of the pan.

WARNING: When brazing, be careful to avoid contact with heat / flame from torch or brazing materials.
